**Without lever, with cap**

Protection cap to use with pneumatic and hydraulic spool positioner kits

**Type SLC**

**Hydraulic controls**

ON/OFF controls with high and low pressure pilot it must be only coupled to 17YME control kit

**Type IA2**  
High pressure pilot

Pilot pressure max. = 250 bar (3620 psi)

**Type IB2**  
Low pressure pilot

Pilot pressure max. = 50 bar (725 psi)

**Wrenches and tightening torque**

**H** = wrench 5 - 9.8 Nm (7.2 lbf<sub>t</sub>)

## Installation and maintenance

The diverter valves are assembled and tested as per the technical specification of this catalogue.

Before the final installation on your equipment, follow the below recommendations:

- the diverter valves can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;
- in order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the diverter valves;
- prior to painting, ensure plastic port plugs are tightly in place.

### Fittings tightening torque - Nm / lbft

These torque are recommended. Assembly tightening torque depends on many factors, including lubrication, coating and surface finish. The manufacturer shall be consulted.
